

Instructions

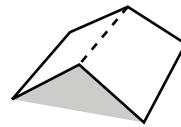

You will need a pair of scissors, some glue and a glue spreader.

The best type of glue to use is white school glue (PVA.)

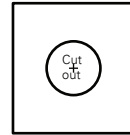

Print out the parts sheets onto thin cardboard. Photocopier card is ideal. Notice that the parts pages are marked front and back. Print out a front page, flip it over, then print the back onto the same sheet. Leave the ink to dry completely before continuing.

Before cutting anything out, score along all the dotted lines. This is easier to do on full sheets of card.

Dashed lines are hill folds. Cut along the solid lines. Grey areas show where to glue

Dashed lines are hill folds

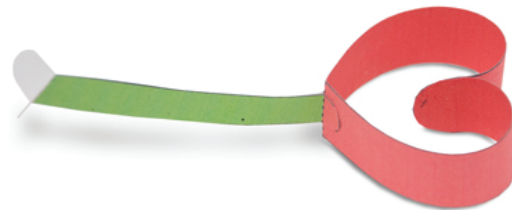

Black lines show where to cut.

Shaded areas show where to glue.

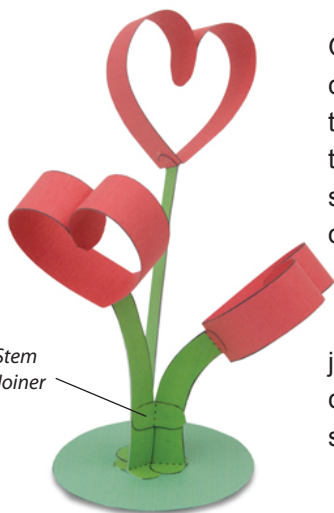

Crease the heart piece on the dotted line then give the two halves a gentle curve before gluing the two grey ends together. Repeat this process with the other two hearts

For each of the three stems, glue the two halves together making sure not to glue the tabs at each end.

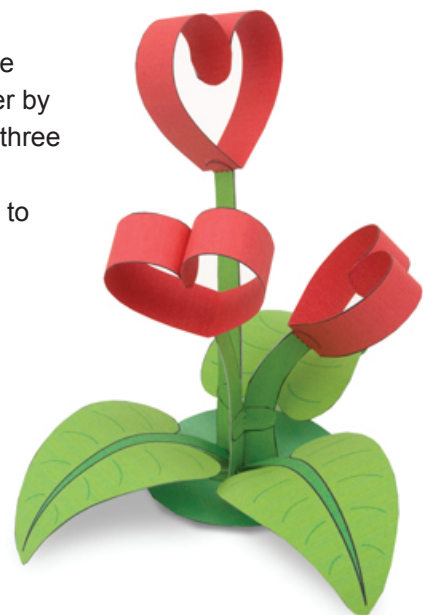

Now glue the Stem to the base of the heart.

Glue the three completed stems to the centre of the base board so that the tabs overlap each other.

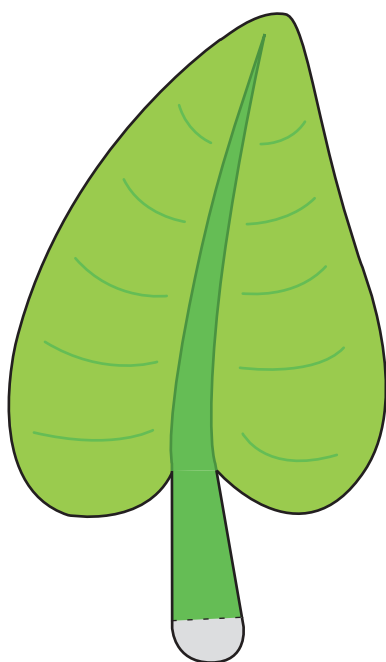

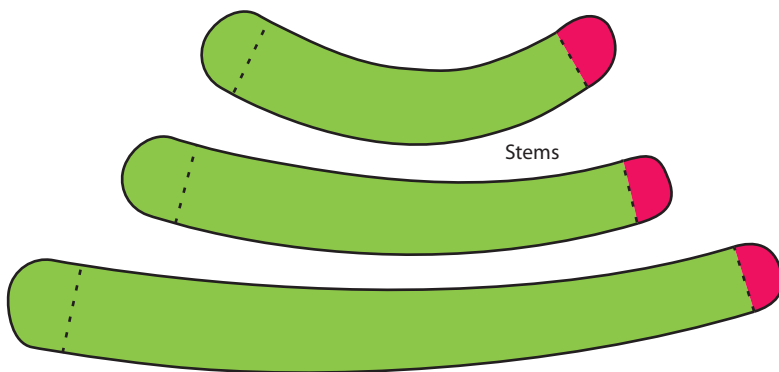

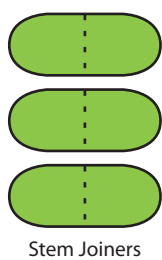

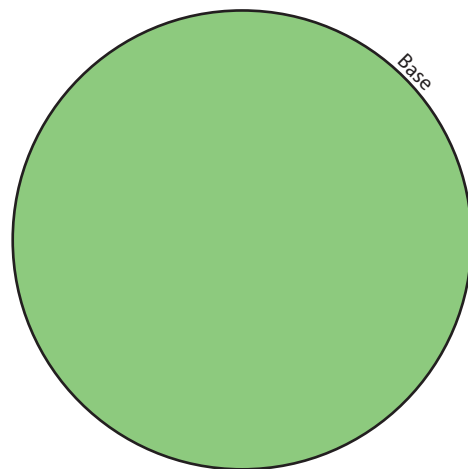

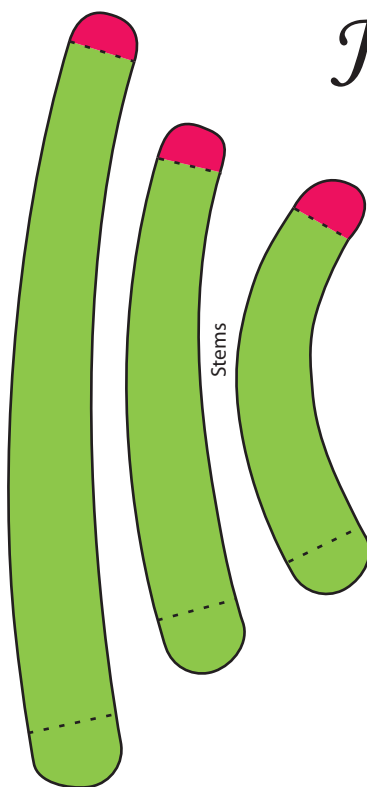

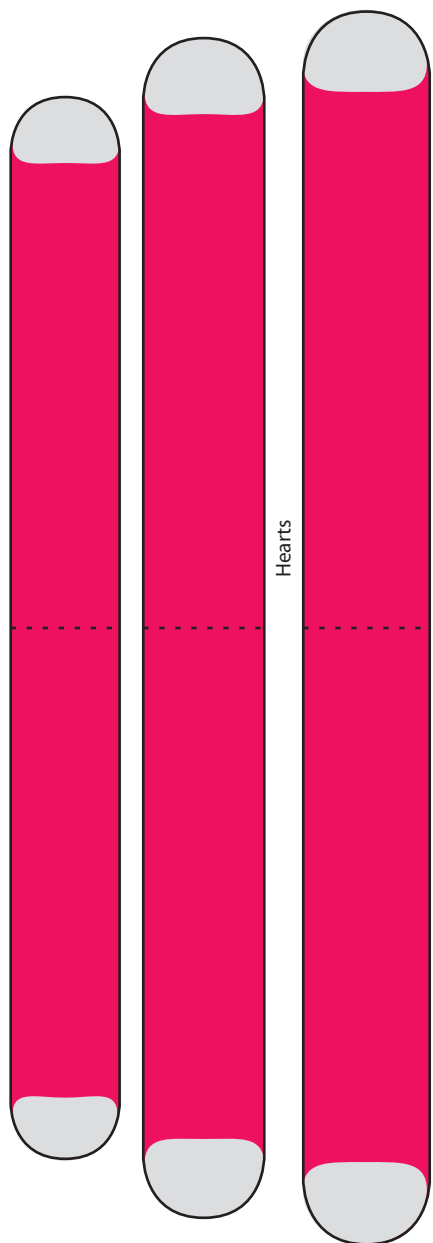

Use the three joiners to connect the stems together.

Finish off the Heart Flower by curving the three leaves then gluing them to the base.
