

iMovie Lesson 1 – Using Images

In this assignment you will write a script, and use images to illustrate the script. Your movie should be at least 30 seconds long and no longer than one minute.

Procedure:

1. Choose a current event, historical event, holiday or person to highlight.
2. Research - Look up information on your topic, so that you have facts to work with.
3. Write a script in google docs about what you want people to know about the event. Think story, so it should have a beginning, middle and ending.
4. Once the script is complete, you can record the script in Garage Band. Speak deliberately, clearly and slowly so that people can understand you. Export the audio file to iTunes on your computer. File > Share > iTunes. Label it with the topic and "audio". Ex. Patriotdayaudio
5. Images - Look for high resolution images that will match your script. Think about when the images will come in, the order they will be viewed and if they capture the meaning you are trying to convey. Save them to a folder on your desktop.
6. Editing in iMovie:
 - a. Create a new project (movie)
 - b. Click on Audio, and in iTunes, click on your narration to import it to iMovie
 - c. Import (↓) your images to iMovie
 - d. Put down your narration track first
 - e. Then place images along the track to match the narration.

- 
- f. Use transitions between pictures for a professional look.
 - g. Add a Credits slide with you as Editor/Narrator and list Google Images as a resource for your images
 - h. Add a title slide with your topic

7. Exporting your Movie:

- a. When you have finished your movie, have a peer look at it, and give you some constructive feedback - use the Level I rubric as a guide.
- b. To Export - FILE > SHARE > FILE, title it with the topic_your last name, example: MLK_Eitner and export it to your movies folder (or to the desktop and then drag it to your movies folder). DO NOT LEAVE iMovie while the video is exporting.
- c. Open your Google classroom and attach the video to the assignment.
